PROFILE

Analytically driven graduate with a quantitative background in engineering and risk modelling, seeking to build a career in energy market trading. Experienced in translating large, complex datasets into actionable commercial insights within Lloyd's market environments. Skilled in Python, SQL, and financial risk modelling, alongside a genuine interest in commodity and power markets. My academic and professional background has centred on energy systems, risk modelling, and sustainability-focused projects, and I am motivated by roles that combine technical modelling and communicating findings to senior stakeholders.

PROFESSIONAL EXPERIENCE

Non-Natural Catastrophe Analyst Aug 2024 – May 2025

Berkley Specialty London · Lloyd's of London Market

- Modelled and quantified risk exposures, specifically cyber, energy, and infrastructure risks, translating complex datasets into pricing-relevant insights for underwriters.
- Built Power BI dashboards and automated reporting pipelines to monitor KPIs and portfolio exposure, enabling faster, data-driven decision-making across underwriting and senior management.
- Collaborated with data engineers to improve data validation workflows, increasing the accuracy and auditability of risk assumptions used in commercial decisions.
- Regularly presented technical findings to non-specialist stakeholders, simplifying quantitative analysis into clear, commercial narratives.

Tax & Compliance Assistant Sep 2023 – May 2024

Lloyd's of London

- Analysed cross-border financial flows and assessed tax implications across multiple jurisdictions (Australia, Singapore), developing commercial awareness of how regulatory environments affect financial decisions.
- Contributed to process optimisation projects, applying structured analytical thinking to improve internal workflows and documentation standards.

Research Analyst Intern Feb 2023 – Mar 2023

Raedas

- Applied open-source intelligence (OSINT) to analyse global disputes and geopolitical risk, producing structured written reports for senior stakeholders.

Technology Infrastructure Project (Voluntary) Oct 2021 – Mar 2022

Young at Heart Ghana

- Used Python, MATLAB, and ArcGIS to model the feasibility and cost-effectiveness of connectivity infrastructure deployment across multiple sites in rural and urban Ghana, demonstrating the ability to apply quantitative tools to real-world resource allocation problems.

EDUCATION

MSc Engineering for International Development

University College London (UCL) *Distinction*

Modules in Reliability Engineering, Risk & Resilience Modelling, and Quantitative Systems Analysis

BEng Mechanical Engineering

University of Nottingham 2:1 (Upper Second-Class Honours)

Dissertation: Quantitative analysis of membrane filtration performance under variable operating conditions

TECHNICAL SKILLS

Programming: Python, SQL, MATLAB, VBA

Data & BI: Power BI (DAX, KPI dashboards), Excel (advanced modelling), ArcGIS

Risk: Exposure modelling, statistical risk assessment, scenario analysis

INTERESTS & ACTIVITIES

I have a strong interest in travel, music, and sport. I boulder weekly, ski whenever possible, and play guitar. I also enjoy exploring new regions, having travelled across Europe and Asia, with plans to visit South America next.

PROJECTS

GB Power Market Analytics Pipeline

Programming used: Python, SQL, Power BI

- Built an end-to-end data pipeline exploring balancing prices, renewable penetration, and thermal generation economics in the GB power market.
- Collected and transformed Elexon BMRS and commodity price data into a clean settlement-period dataset, serving a single fact table for Power BI analysis.
- Analysed how intraday price shape, wind penetration, and clean spark spreads interact across different market conditions using Python, SQL, and Power BI visualisation.
